

CURRICULUM VITAE RESUMIDO

César Viseras is Full Professor of Stratigraphy at the University of Granada (Spain) where he leads the **Sedimentary Reservoirs Workgroup** (<http://www.sedregroup.com>).

He has supervised 5 PhD theses on sedimentology of siliciclastic rocks and is the author of more than one hundred papers and presentations in congresses, some in magazines of petroleum spectrum such as *AAPG Bulletin*, *Marine and Petroleum Geology*, *Journal of Sedimentary Research*, *Geology*, *Sedimentary Geology*, *Marine Geology*, *PLOSone*, *Sedimentology* among others. He is currently Principal Investigator of the research projects ***Continental formations as potential conventional and non-conventional reservoirs: outcrop and subsurface characterization*** and ***Coastal and shallow-marine sandstones as reservoir analogues: integrated characterization of outcrop and subsurface***.

He is an active AAPG and EAGE member and belongs to the Steering Committee of the AGGEP (Spanish Association of Petroleum Geologists and Geophysicists). He has long experience in collaboration with exploration and production departments of companies through research and training for upstream teams and imparts the subject of *Siliciclastic Reservoirs* in the Master of Energy Resources of the University of Granada.
